5. Discussion

What's monorepo

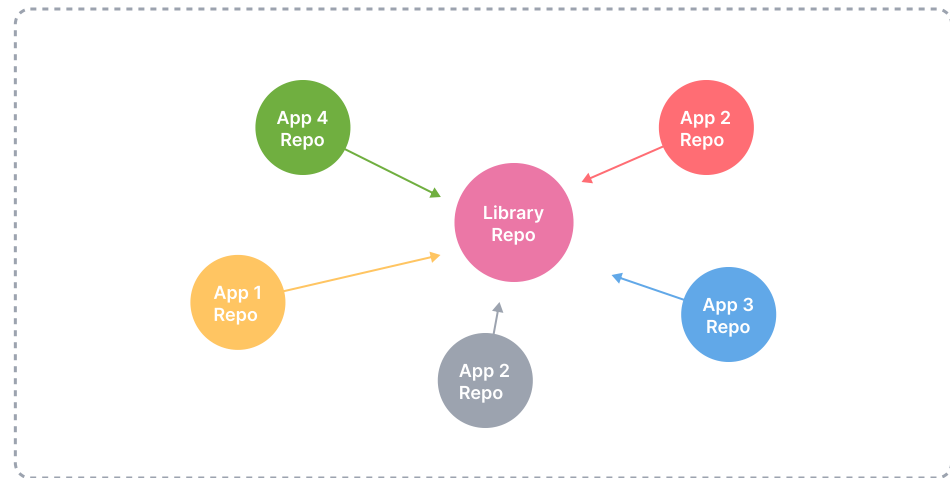

A single repository containing **multiple distinct projects**, with **well-defined relationships**.

- Detecting affected projects/packages
- ability to run tasks in the correct order and in parallel
- Consistent tooling

Monorepo

Polyrepo

reference: Misconceptions about Monorepos: Monorepo
!= Monolith

Why use monorepo?

Pros:

- 共享程式碼與資源
- 簡化部署與維護
- 提高協作效率

Cons:

- 增加 Repository 複雜度

Why use polyrepo?

Pros:

- 專案單純易懂
- 技術選擇獨立
- 專案間相依定義明確：版號

Cons:

- 重工
- CI/CD 各專案各自設定，更動成本高

Nx

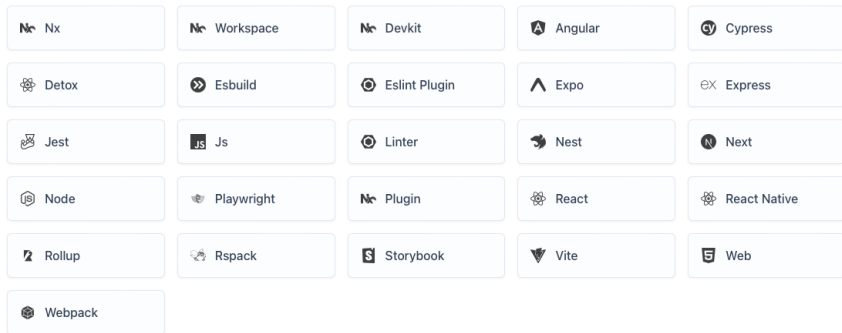

Next generation build system with first class monorepo support and powerful integrations.

- 提高開發效率
 - Project Generator
 - Task Executor
 - 根據需求可客制專案模板？
- 提高可維護性
 - 使用命名約定來提高代碼的可讀性
 - 使用 linters 和型別檢查來提高代碼質量
- 提高可測試性
 - Unit, Integration, E2E Tests
 - 自動化測試流程
 - 對依賴的專案重新測試

reference

	Bazel (by Google) "A fast, scalable, multi-language and extensible build system."	Gradle (by Gradle, Inc) "A fast, flexible polyglot build system designed for multi-project builds." Distributed task execution	🟢	🟡	—	🟢	🟢	🟢	🟡	—
Transparent remote execution	🟢	—	—	—	—	🟢	—	—
Detecting affected projects/packages	🟡	🟢	🟢	🟢	🟢	🟢	🟢	🟢
Understandable								
Workspace analysis	🟡	🟢	🟢	🟢	🟢	🟢	🟢	🟢
Dependency graph visualization	🟢	🟡	🟡	🟢	🟢	🟡	🟡	🟢
Manageable								
Source code sharing	🟢	🟢	🟢	🟢	🟢	🟢	🟢	🟢
Consistent tooling	🟢	🟢	—	—	🟢	🟢	—	—
Code generation	🟡	🟡	🟡	🟡	🟢	🟢	🟡	🟡
Project constraints and visibility	🟢	🟡	🟡	🟡	🟢	🟡	🟢	🟡

Generators, Executors

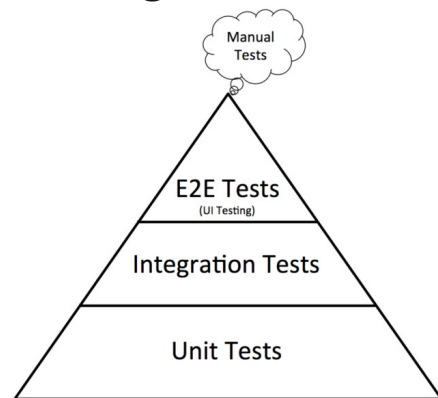

1. Official

2. Communities

- Local Generators(Expensive)
- Local Executors(Expensive)

3. nx:run-commands

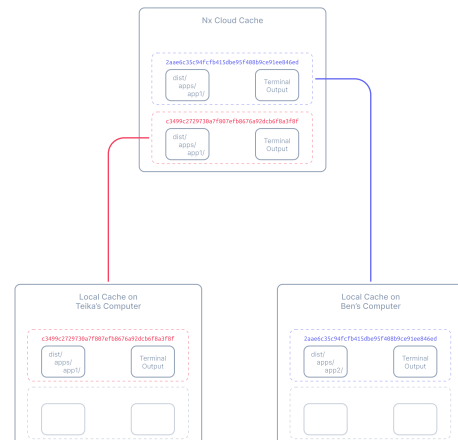

Testing

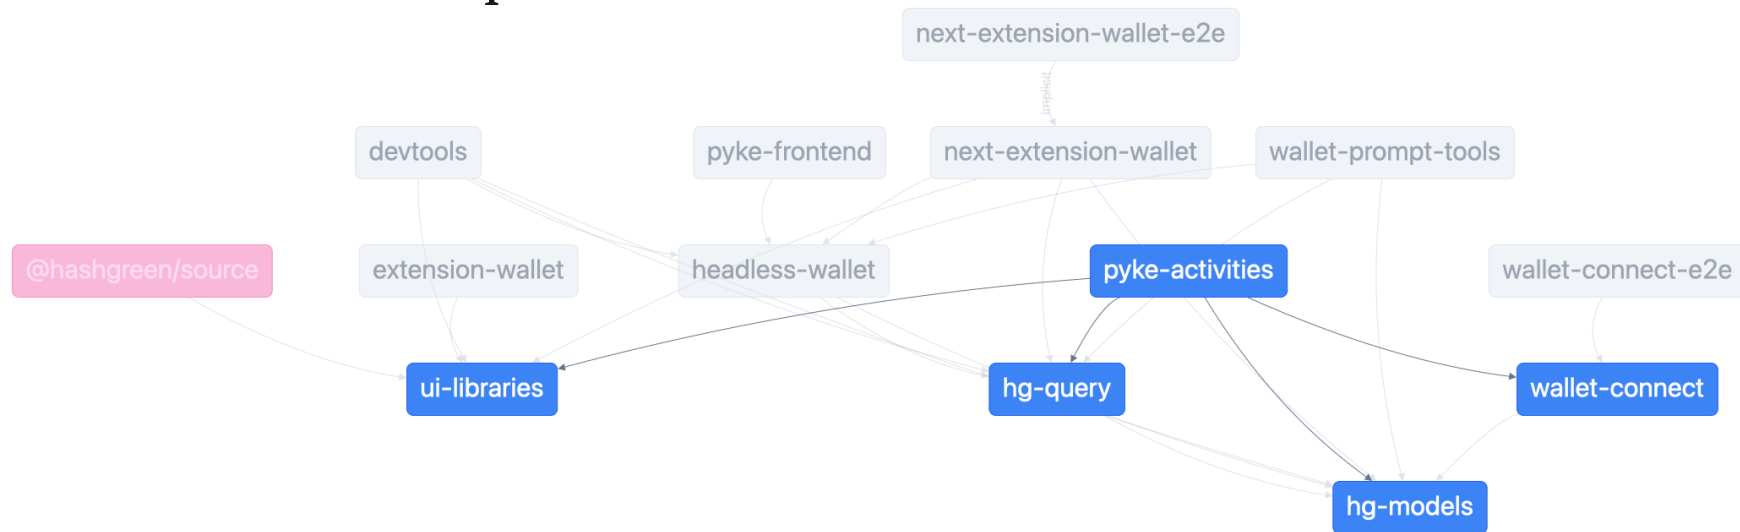

- Unit Tests : 對 libraries
 - Jest
 - Vitest
- Integration Tests:
- E2E Tests: 對 apps
 - Playwright
 - Cypress

Caching

- Local Caching
 - 提升個人開發效率
- Remote Caching
 - 提升組織開發效率
 - 降低CI成本

frontend-monorepo

Libraries

hg-models	data classes
hg-query	data fetching e.g. Fetch API, SWR, RTK Query
headless-wallet	headless chia wallet
ui-libraries	utilities, hoogii, pyke

Apps

- pyke-activities
- wallet-prompt-tools
- devtools
- extension-wallet

Tests

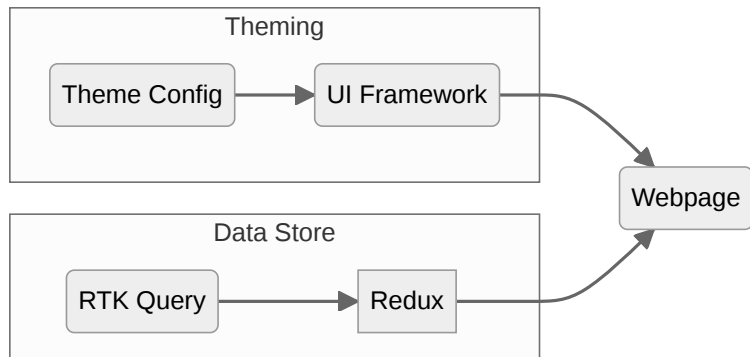

- pyke-frontend:
 - e2e test on stg
- wallet-connect-e2e:
 - integration tests for wallet-connect

Case Study - Pyke, Hoogii and Ivern - Before

Hoogii

Pyke

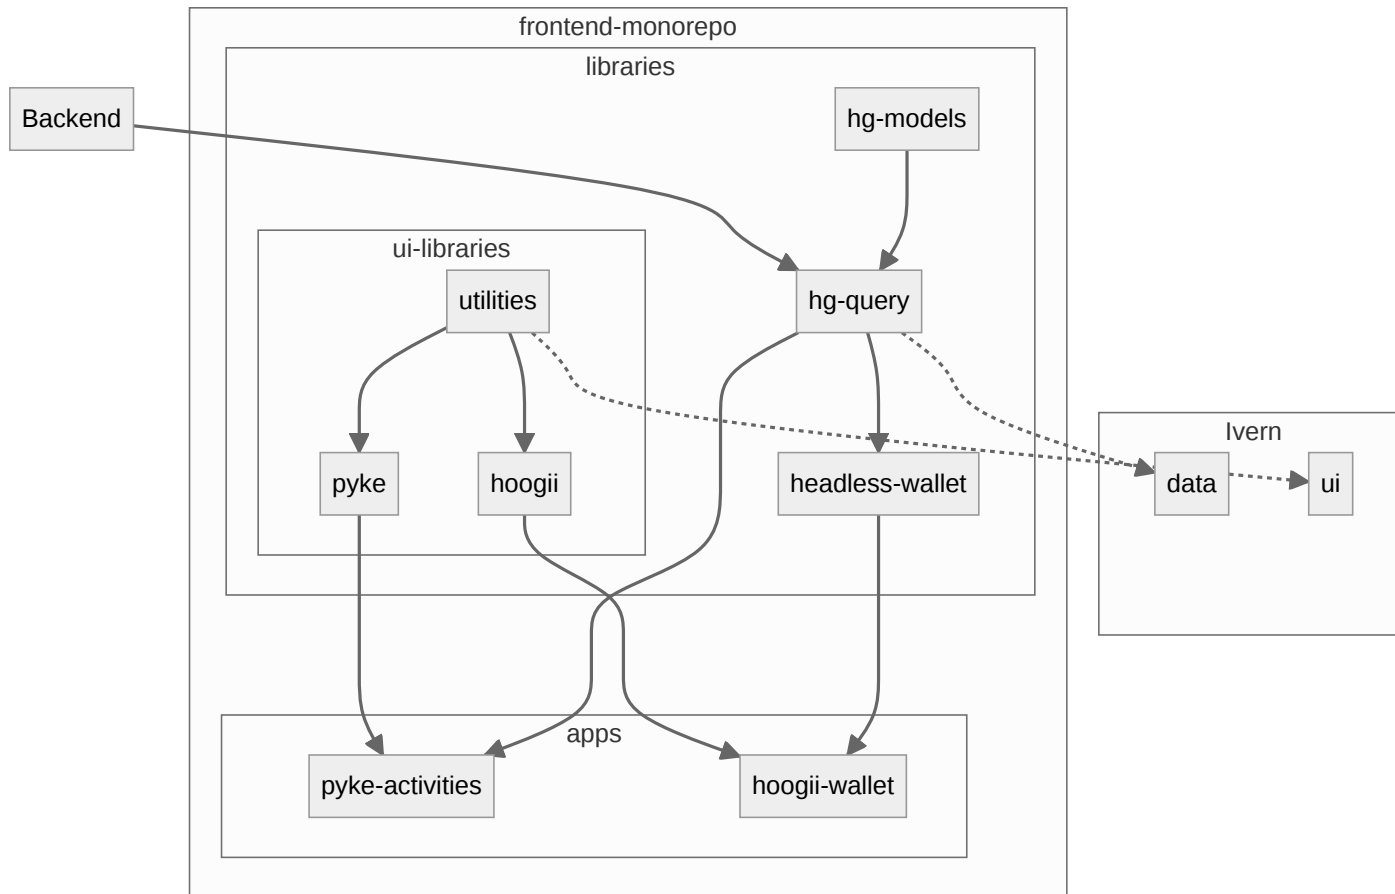

Ivern

共通項目

- Theming:
 - 色票、字型設定
 - 常用功能的 CSS classes
- Data Store:
 - 資料拿取的網址、傳輸的資料
 - 取得資料後的後處理

Case Study - Pyke, Hoogii and Ivern - After

Discussion

1. js/ts bundler 扮演專案間接合劑; ts compiler 做 bundlers 間的縫合; linters 作為其中的約束器

- Vite
- Webpack/Turbopack
- `tsconfig.base.json`: 設定全域模組引入
- `/.eslintrc.json`: 限制模組依賴

2. 程式碼歸屬、存取修改權限的限制

3. 版號控制、CI/CD 效率提升

- libries
 - workflow_dispatch
 - 改動偵測、利用 dependencies graph 達到有效率的自動化部屬
- apps
 - containerize
 - 結案、維運的專案的封存機制
